

Heliophysics Community of Practice (CoP)

On August 20, 2013, the Heliophysics Community of Practice Lead Teachers participated in a videoconference meeting to learn about mapping magnetic field lines. Dr. Laura Peticolas of UC Berkeley's Space Sciences Lab demonstrated how to map magnetic field lines using magnets and compasses, then teachers shared how they have adapted this activity in their classroom.

This meeting was part of the monthly series of videoconferences for the CoP Lead Teachers coordinated by the THEMIS-ARTEMIS mission, the Van Allen Probes mission and the Heliophysics Forum.
